The amendment filed December 2, 2002 has been entered and made of record as paper no. 7.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Simpson et al (cited by Applicants).

Simpson discloses in figures 1 and 2 a high frequency semiconductor device having a doping profile comprising a buried oxide (38A) and a silicon layer (32) in which an origin of a doping profile of the silicon is within a body region of the device. Simpson discloses on line 32 of column 4 that "the minimum charge doping  $Q_{min}$  ranging from zero to a relative low value". It would have been obvious that the doping profile is shifted to the left side of the oxide layer (38A). In re claim 8, Simpson discloses on line 37 of column 4 that the point x0 may be located about 2-4 microns from the edge 30A of the body region which is about the same distance between point x0 to the edge 38C of the top oxide 38.

Claims 1-13 stand alternatively rejected under 35 U.S.C. 103(a) as being unpatentable over Merchant et al (5,300,448), cited by Applicants.

Merchant et al also discloses a "shifted doping profile" in the silicon layer in which the dopant level is approximately zero. Note figures 3-4E of Merchant et al.

Art Unit: 2814

Applicant's arguments filed December 2, 2002 have been fully considered but they are not persuasive.

The term "body region" is simply broad. Any region in a semiconductor layer can be defined as body region. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Further, note that the phrases "shifted doping profile" and "an original of a doping profile" are simply broad. It is well known that any silicon layer before doping is in intrinsic (non-doped) state and therefore it has an original of a doping profile approximately zero.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
